## ECU Low Lift Pallet Truck

---

Can be manoeuvred in confined spaces: creep speed switch on tiller head

Impressive goods handling: lifting capacity of up to three tonnes

Safe and efficient due to optimum view on tip of the forks

---

### ECU

The ECU low lift pallet truck is perfectly suited to the horizontal transport of up to 3,000 kg over short distances. Its compact size and exceptional manoeuvrability make it the ideal warehouse assistant even in confined spaces, for example for the preparation of goods. The cleverly positioned creep speed switch is an optional extra that is also of great advantage. It is located on the tiller head, meaning smooth and precise manoeuvring is possible even when the tiller is vertical. As a result of the well thought-out tiller design and the intelligent arrangement of the control elements, the ECU can be fully operated with one hand, whether the operator is left- or right-handed. Boasting a chassis made of robust materials, which can withstand even severe impacts without being deformed, and an extremely low-wear drive wheel, the ECU impresses with low operating costs even when in continuous use.

---

### ECU Full Lead

The ECU Full Lead is a real bundle of energy. Thanks to its full lead battery, the manoeuvrable pallet truck can be charged up very quickly, and its modern energy source also allows for interim charging. The small size of its battery also means that the ECU Full Lead is particularly compact. Consequently, safe and precise operation is guaranteed even in confined spaces – whether loading and unloading lorries via a ramp or working in narrow warehouse gangways or supermarket aisles. Of course, the ECU Full Lead also comes with all of the usual advantages of the reliable ECU product line, such as the integrated charger, which saves the space and money which would be needed for an external charging station, and the energy recovery when braking.

---

## Extensive Equipment

---

### Power

- High handling performance thanks to lifting capacity of up to three tonnes
- Full power: low-maintenance and enclosed rotary current drive

---

### Precision

- Can be manoeuvred even in confined spaces thanks to optional creep speed switch on tiller head
- Optimum view on tip of the forks
- Fast and precise: rounded forks are easier to thread into the pallets

---

### Ergonomics

- Control elements that are well suited to left and right-handed operators
- Fast operation, without needing to look at the buttons: buttons can be clearly differentiated by their tactile characteristics

---

### Compactness

- Impressive reloading of pallets: compact size allows for quick and safe operation
- Perfect in confined spaces: extremely mobile thanks to short and narrow design

---

### Safety

- The reliable impact switch protects the health of the operator
- Unauthorised access not possible: series access authorisation via PIN code

---

### Environmental Responsibility

- Very few noise emissions
- Energy recovery when braking
- Over 95 percent of all materials used are recyclable
